Phase 9 — Deep Exploration Plan

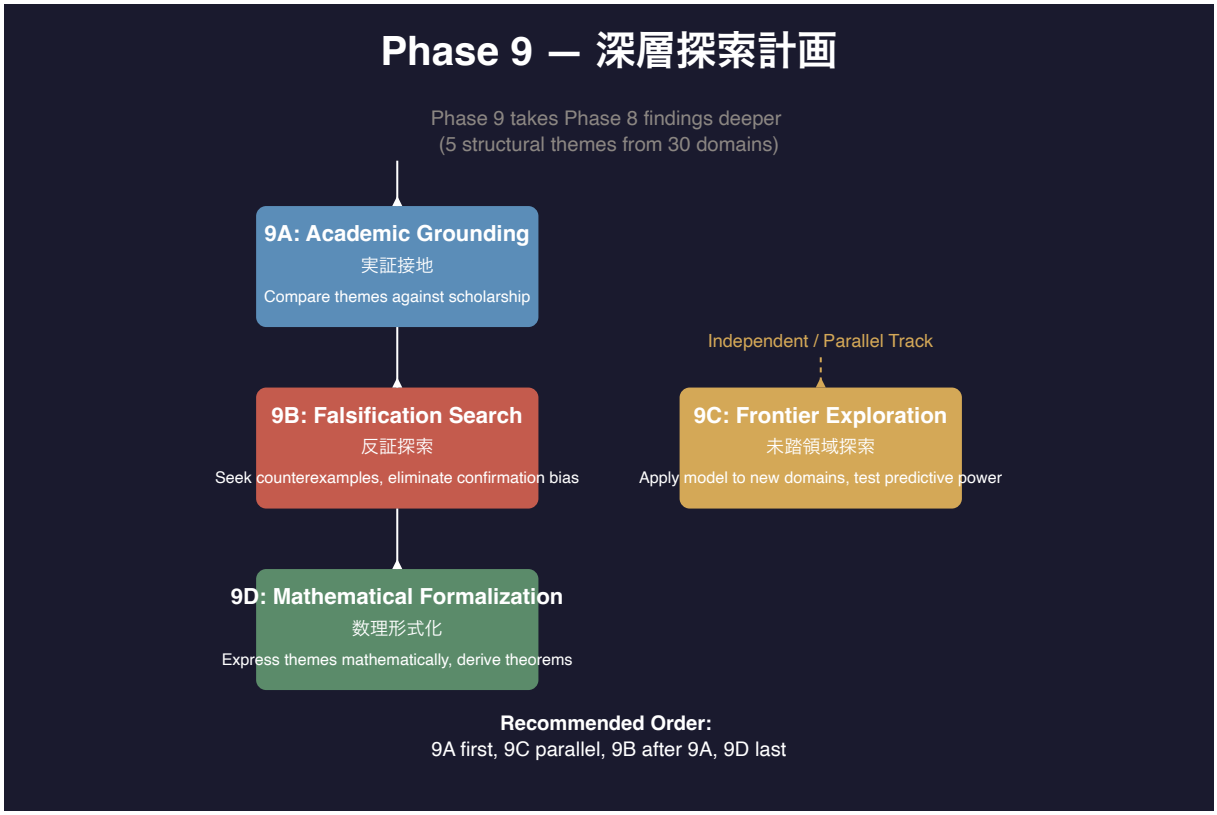

Figure 1: Phase 9 Deep Exploration Plan — Plan Overview Infographic

Context

Phase 8 identified five structural themes that recur across 30 academic domains. Phase 9 takes these findings deeper: How well do they hold up against existing scholarship? Where do they break down? Can they be extended to new domains? Can they be formalized mathematically?

Four Tracks

Track	Name	Purpose
9A	Academic Grounding	Compare structural themes against existing scholarship to separate supported claims from untested ones
9B	Falsification Search	Actively seek counterexamples and failure cases to eliminate confirmation bias
9C	Frontier Domain Exploration	Apply the model to domains outside the original 30 to test predictive power
9D	Mathematical Formalization	Express structural themes in mathematical notation to enable theorem derivation and prediction

Dependencies

- **9A → 9B**: Falsification is most effective after grounding results are available
- **9A, 9B → 9D**: Formalization targets revised claims from 9A and 9B
- **9C**: Independent of other tracks, though results from 9A/9B improve prediction accuracy

Recommended Start Order

1. **9A Academic Grounding** — Start first, beginning with Edge Typology (28 domains)
2. **9C Frontier Exploration** — Can run in parallel with 9A
3. **9B Falsification Search** — After 9A produces initial results
4. **9D Mathematical Formalization** — After 9A/9B revised claims are available

Current Status

All four tracks are in the planning stage. Detailed investigation plans are available through each track's card.
