Track 9A — Academic Grounding: Literature Alignment Study

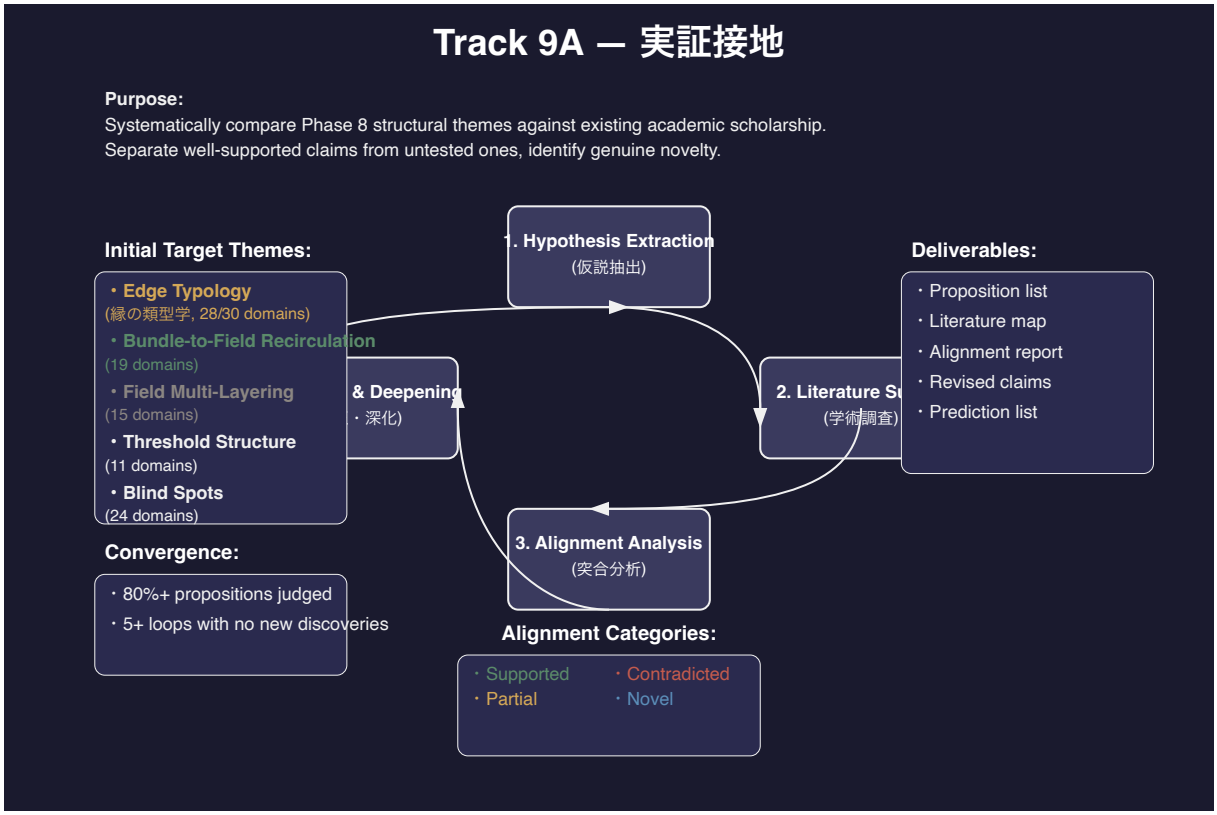

Figure 1: Track 9A Academic Grounding — Plan Overview Infographic

Purpose

Systematically investigate how well the structural themes extracted in Phase 8 align with existing academic scholarship. The goal is to clearly separate well-supported claims from untested ones, and to identify where genuine novelty exists.

Initial Target

Starting with **Edge Typology**, the most broadly observed theme (28 of 30 domains).

Order	Theme	Domains
1	Edge Typology	28
2	Bundle-to-Field Recirculation	19
3	Field Multi-Layering	15
4	Threshold Structure	11
5	Blind Spots and Counterexamples	24

Methodology

Step 1: Hypothesis Extraction

Decompose each theme's major claims into testable propositions.

Example: "Boundary condition types converge to four patterns across domains."

Step 2: Literature Survey

For each proposition, identify relevant academic fields and search for prior research. Cross-disciplinary awareness is essential — the same phenomenon may be studied under different names in different fields. Meta-analyses and review papers take priority.

Step 3: Alignment Analysis

Compare creation-space claims against academic findings using four categories:

Judgment	Meaning
Supported	Prior research corroborates the claim
Partial	Conditionally or partially aligned
Contradicted	Prior research presents opposing evidence
Novel	No relevant prior research found

Step 4: Revision and Deepening

- Contradictions found: Revise the claim or add conditions
- Novel territory: Record as a novelty claim and derive testable predictions
- New questions emerge: Return to Step 1

Deliverables

For each theme:

- **Proposition list** — Claims decomposed into testable form
- **Literature map** — Organized collection of discovered academic references
- **Alignment report** — Judgment results across four categories
- **Revised claims** — Updated versions reflecting findings (where applicable)
- **Prediction list** — Testable predictions for novel claims

Convergence Criteria

- 80% or more of major propositions have received a judgment
- Five or more loops completed with no new discoveries
- A fundamental contradiction necessitating theme restructuring is identified
